d IBM expands, use, of, Red Hat for servers	Red Hat, the top distributor of Linux operating system software in the United State, s, said IDM 's new server and mainframe computers will run Ked Hat Linux.	Previously, the world's largest computer maker only offered Red Hat Linux on one of its four server lines. Last week, IBM said it will nverhoul its entire line of servers and mainframes under the brand name eServer to meet the rising demands of the Internet. Teims of the deal weren't disclosed.	The relationship "represents a significant fevenue opportunity" for Red Hat, said Pa LOUNNY all McNamara, the company's vice president of products and platforms, who declined to provide specific estimates. Linux has traditionally been more popular for cuming 1.  System ow end servers. The availability of high-end IBM servers with Linux gives Red Hat access to new customers.	Red Hat also announced the availability of software packages that bundle its Linux 3 of tware with programs like database and small business software from IBM. The companies agreed in August to jointly market these packages.	The Linux programming code is distributed freely and can be modified by software devisioners, two factors that have helped it gain popularity as a program for running seinvers. Last year, a quarter of the new server operating system software shipped was Linux, according to research firm IDC, which expects Linux to be the fastest-growing.
